Abstract of the Disclosure

~~The purpose of the present invention is to provide a~~ **A** method and a system **are disclosed** for enabling an automatic creation of a parts list and 3-dimensional illustrations of a product based on 3-dimensional CAD or XVL data of an industrial product consisting of a plurality of parts. ~~In order to attain the above objective, according to a principal aspect of the present invention, there is provided a~~ **A** method for generating a parts catalog consisting of a parts list and corresponding disassembly illustrations **is provided**. This method comprises the steps of (a) assigning reference numerals/symbols based on the parts list~~, to each of parts groups belonging to an initial process of disassembly, and to each of the parts groups belonging to an intermediate process of disassembly, respectively~~; (b) building a disassembly algorithm based on the parts list; and (c) generating disassembly illustrations based on the disassembly algorithm, wherein minimum disassembly units of the disassembly illustrations are parts and parts groups assigned with the reference numerals/symbols, and displaying the reference numeral/symbol for each of the parts and parts groups in the disassembly illustrations.
